

## IN THE CLAIMS

11. A method for developing tooth brushing habits in children comprising steps of :

- a. Applying pressure on handle of a musical tooth brush while a plurality of bristles coupled to a toothbrush head of said musical toothbrush touch user's teeth;
- b. in response to step a, said pressure automatically transfers to a pressure sensitive plate coupled to said plurality of bristles causing an optical signal;
- c. in response to step a, said pressure automatically transfers to a pressure sensitive plate coupled to said plurality of bristles causing an optical signal;
- d. programming a programmable controller for transmitting said electrical signal to a music source when said electrical signal is within a range set by the user; and
- e. said electrical signal causing said music source positioned in said toothbrush handle to provide music for said user.

12. A method for developing tooth-brushing habits in children as described in Claim 11 wherein said music source provides music when said pressure applied to said handle of said musical toothbrush is within a pre-determined range.

13. A method for developing tooth-brushing habits in children as wherein said range is determined by American Dental Association.

14. A method for developing tooth-brushing habits in children as wherein said electrical signal is not transmitted to said music source when said pressure is not within said range.

In light of the above election, Applicants respectfully request allowance of claims 11-14.

The examiner is urged to contact Applicant's undersigned representative if the Examiner believes such action would expedite resolution of the present Application.

Respectfully submitted
